(3) Water Level 23' - 5" feet below top of ground.

(4) Cased to 68', Size 12"

(5) Screen: Size 12", Length 50'

(6) Were any formations sealed against pollution?

 yes, no no.

If YES depth of formation

Why

Drillers Remarks:

1200 GPM

engine drive

(Use Back Side)

Well No.

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that every entry should be supported by a valid receipt or invoice. This ensures transparency and allows for easy verification of the data.

In the second section, the author outlines the various methods used to collect and analyze the data. This includes both primary and secondary data collection techniques. The primary data was gathered through direct observation and interviews, while secondary data was obtained from existing reports and databases.

The third section details the statistical analysis performed on the collected data. Various tests were conducted to determine the significance of the findings. The results indicate a strong correlation between the variables being studied, which supports the initial hypothesis of the research.

Finally, the document concludes with a summary of the key findings and their implications. It suggests that the current practices need to be revised to better align with the observed trends. Further research is recommended to explore the long-term effects of these changes.
