WATER WELL DRILLERS LOG

CODED

Date: 7-13, 1962, Driller: J.C. Reeves County Monroe

KENNETH REICH (Name)

(1) Owner of Land: RAMIE GREEN (Name)

AMORY, Miss (Address)

(2) Location: 1/4, 1/4, Sec. 34 T12S R7E

3 miles W of AMORY (distance) (direction) (Nearest Town)

(3) Topography: LEVEL (Hilly) (Flat) (Level)

(4) Purpose of Well: STOCK (Domestic Irrigation) (Municipal; Industrial, Other)

Description & Color of Materials Sand, Clay, Red Clay, Shell, etc.	Thick- ness Feet	Depth Feet
CLAY	19	0
BLUE SAND(SOFT)	19	19
" CLAY	49	38
" SAND	38	87
" CLAY	14	125
BLUE SD. - THIN CL. STRKS	43	139
WHITE SAND	30	282
WHITE GUMBO	18	312

Information upon completion of well:

(1) Diameter 4 inches.

(2) Total Depth 330 feet.

(3) Water Level 3 feet ABOVE below top of ground.

(4) Cased to 10 1/2', Size 4"

(5) Screen: Size, Length

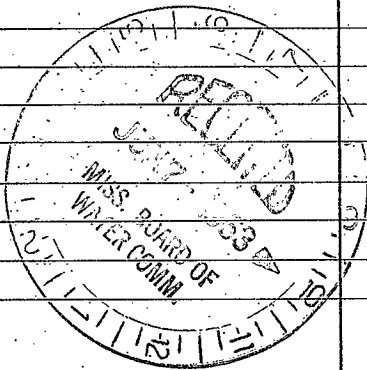

(6) Were any formations sealed against pollution? yes, no.

If YES depth of formation

Why

Drillers Remarks: FLOW APPROX. 100 g.p.h. - 30" ABOVE GROUND

CODED

(Use Back Side)

Well No.

The first part of the paper is devoted to a discussion of the general theory of the subject. It is shown that the theory is based on the assumption that the system is in a state of equilibrium. This assumption is justified by the fact that the system is assumed to be in a state of equilibrium. The theory is then applied to the case of a system in a state of equilibrium. It is shown that the theory is in agreement with the experimental results. The theory is then applied to the case of a system in a state of equilibrium. It is shown that the theory is in agreement with the experimental results.

The second part of the paper is devoted to a discussion of the general theory of the subject. It is shown that the theory is based on the assumption that the system is in a state of equilibrium. This assumption is justified by the fact that the system is assumed to be in a state of equilibrium. The theory is then applied to the case of a system in a state of equilibrium. It is shown that the theory is in agreement with the experimental results. The theory is then applied to the case of a system in a state of equilibrium. It is shown that the theory is in agreement with the experimental results.

The third part of the paper is devoted to a discussion of the general theory of the subject. It is shown that the theory is based on the assumption that the system is in a state of equilibrium. This assumption is justified by the fact that the system is assumed to be in a state of equilibrium. The theory is then applied to the case of a system in a state of equilibrium. It is shown that the theory is in agreement with the experimental results. The theory is then applied to the case of a system in a state of equilibrium. It is shown that the theory is in agreement with the experimental results.

The fourth part of the paper is devoted to a discussion of the general theory of the subject. It is shown that the theory is based on the assumption that the system is in a state of equilibrium. This assumption is justified by the fact that the system is assumed to be in a state of equilibrium. The theory is then applied to the case of a system in a state of equilibrium. It is shown that the theory is in agreement with the experimental results. The theory is then applied to the case of a system in a state of equilibrium. It is shown that the theory is in agreement with the experimental results.

The fifth part of the paper is devoted to a discussion of the general theory of the subject. It is shown that the theory is based on the assumption that the system is in a state of equilibrium. This assumption is justified by the fact that the system is assumed to be in a state of equilibrium. The theory is then applied to the case of a system in a state of equilibrium. It is shown that the theory is in agreement with the experimental results. The theory is then applied to the case of a system in a state of equilibrium. It is shown that the theory is in agreement with the experimental results.
