description of formations encountered	from	to
Red clay	0	18
Red sand	18	56
Sand gravel	56	78
Chalk sand	78	91
Small gravel sand	91	104

This lower formation is very porous and is a tough drilling. Very hard to seal with mud to get drilling water to return.

Someone who has the authority should require a fresh water well for this person - his old well became salty. This well was drilled down fresh water well but it is still salty.
