Well No.

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion in 1990 to 1.5 billion in 2000, and to 1.8 billion in 2010.

It is clear that the world's population is increasing rapidly, and that the number of children is increasing even more rapidly. This is a major challenge for the world's governments, and for the international community as a whole. It is essential that we find ways to meet the needs of these children, and to ensure that they have a bright future.

One of the most important ways to meet the needs of children is to provide them with a good education. Education is the key to a better future, and it is essential that we ensure that every child has access to a quality education. This means that we need to invest in education, and to ensure that it is accessible to all children.

Another important way to meet the needs of children is to provide them with a safe and healthy environment. Children need a clean and safe environment in which to grow and develop. This means that we need to take steps to reduce pollution, and to ensure that children have access to clean water and air.

Finally, it is essential that we provide children with a safe and secure environment. Children need to feel safe and secure in their homes and communities. This means that we need to take steps to reduce violence, and to ensure that children have access to safe and secure housing.

There are many other ways to meet the needs of children, and it is essential that we find ways to do so. We need to work together, and to ensure that every child has a bright future.

The world's children are our future, and it is our responsibility to ensure that they have a bright future. We need to invest in education, and to ensure that every child has access to a quality education. We need to provide children with a safe and healthy environment, and to ensure that they have access to clean water and air.
