Well No.

the 1990s, the number of people in the UK who are aged 65 and over has increased from 10.5 million to 13.5 million, and is projected to reach 17.5 million by 2020 (Office for National Statistics 2000).

There is a growing awareness of the need to address the health care needs of the elderly population, and the need to ensure that the health care system is able to meet the needs of this population. This has led to a number of initiatives, including the development of the National Health Service (NHS) Long Term Plan (NHS 2000) and the development of the National Health Service (NHS) Plan (NHS 2001).

The NHS Long Term Plan (NHS 2000) sets out the government's long-term strategy for the NHS, and includes a number of key objectives, including the need to improve the health of the population, to reduce health inequalities, and to ensure that the NHS is able to meet the needs of the population in the future.

The NHS Plan (NHS 2001) sets out the government's strategy for the NHS in the short term, and includes a number of key objectives, including the need to improve the quality of care, to reduce waiting times, and to ensure that the NHS is able to meet the needs of the population in the future.

The NHS Long Term Plan (NHS 2000) and the NHS Plan (NHS 2001) are both important documents that set out the government's strategy for the NHS. They are both essential for ensuring that the NHS is able to meet the needs of the population in the future.
