******** USER NOTES ********

Drilled by Roland (USGS Ruston LA) and Shane Stocks (USGS Jackson MS)

Note that there are two monitoring wells at this site.

EC-log for adjacent hole (refer to YZ-07a-EC) shows clay from near surface to 40 ft bls; sand 40–60 ft bls; clay 60–78 ft bls; sand 78–98 ft bls.

Core intervals for this borehole: 9.5–14.5; 29.5–34.5; 39.5–44.5; 59.5–64.5.

Successful pushed 3.25" rods to install a 47 ft bls monitoring well.

Well construction: This 2" PVC monitoring well is ~50 ft from bottom of point to TOC with a 10 ft screen; screened interval is ~37–47 ft bls; MP is 3.00 above land surface with aluminum protective riser and 2 ft radius concrete slab; a 4" point was added to btm of casing; about 5 gallons of tap water were poured into PVC casing prior to pulling rods; this technique was used to balance and equalize pressure.

About 2 cups of bentonite granules were poured into the annular space of the borehole and bridged over around 20 ft below land surface (bls). Portland cement at a tap water ratio of 5-6 gals per 92-lb bag was used to seal the borehole from about 30 ft bls to land surface. PVC guard posts were installed to help locate well when grass is high.

Water level:

7/29/19 @ 0945 = 8.20 - 1.00 - 3.00 = 4.20 ft bls measured with e-tape by Roland W Tollett of the USGS.

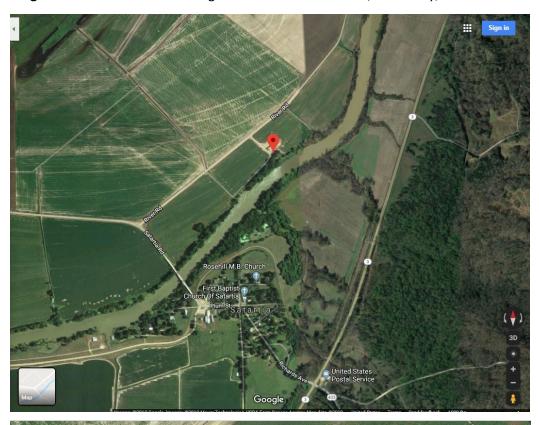

*Note that all water level tapes used by the USGS are calibrated by the HIF.
